# Clean Resources Hub leverages distributed generation market momentum

September 26, 2013 | By Barbara Vergetis Lundin

The Clean Coalition has launched the Clean Resource Hub, which provides tools to help policymakers, utilities, and advocates expand the wholesale distributed generation (WGD) market segment throughout the United States.

WGD comprises the majority of renewable energy capacity deployed worldwide. Across the United States, the focus is growing. Georgia Power, Long Island Power Authority, and the Los Angeles Department of Water and Power are among the latest utilities to initiate or expand Clean Programs (feed-in tariffs with streamlined interconnection procedures) to create hundreds of megawatts of WDG market opportunity.

guides, and global best practices, to ensure that stakeholders have the tools they need to enact impactful policies and programs.

The Clean Resource Hub leverages this momentum. The Hub contains information, including model policies, program design guides, and global best practices, to ensure that stakeholders have the tools they need to enact impactful policies and programs.

"Global experience tells us that wholesale distributed generation is the key market segment for rapidly deploying cost-effective renewables," said Ted Ko, associate executive director of the Clean Coalition. "The Clean Resource Hub, built on the Clean Coalition's deep market experience, will ensure that communities across the U.S. can capitalize on this opportunity."
